While an engine is running it makes a lot of engine noises and vibrations. BMWs use sound deadening pads and covers to mask the noise and rubber engine mounts isolate the engine vibration from the chassis of the car. When a motor mount fails it allows the engine to move around in the engine compartment.

The rubber / isolator motor mounts are relatively easy to replace. The basic steps, below, would apply to most BMW models. 1) Place a jack under the oil pan. Position a block of wood between the jack and the pan (that is wider than the pan), to distribute the pressure from the jack's pad over the pan, to the edges. 2) Remove the lower nuts on ...
